“

I was born in South Africa and now live in the South Coast of England, I find joy in the beauty of my surroundings, drawing inspiration from nature, architecture, and the vibrancy of life.

After working as an Optometrist prior to starting a family, I was motivated to transform a lifelong passion into a profession after constructing our own family home.

I completed an Interior Design Diploma and established Lorna Smith Interiors.

Best regards,

Lorna Smith  
Interior Designer

”

“We are so pleased with our updated bedroom, it is just perfect for us, Lorna used our existing items and made them all work together in a way we could not do on our own.”

# SERVICE

## LIGHTING DESIGN

A thoughtfully designed lighting plan elevates a room's design and enhances ease and comfort for daily use. It can truly transform a space during the evening hours.

It is essential to address lighting early in a renovation or new construction project, ensuring that the electrician can install everything correctly from the outset.

We begin with the furniture layout and design the lighting plan taking the following into consideration:

- General, task, accent, and decorative lighting
- Circuits
- Switch placement
- Lamp wattage and color
- Functional and decorative fixtures
- Safety considerations

**Investment:**  
From £250 per room (+VAT)

**Timeframe:**  
Average 1 -2 weeks

### The Process:

- Consultation: I will take a detailed brief to understand your needs and style
- To get Started: We will need plans, elevations, furniture layout and photographs (we can do these plans if you do not already have them)

### Deliverables:

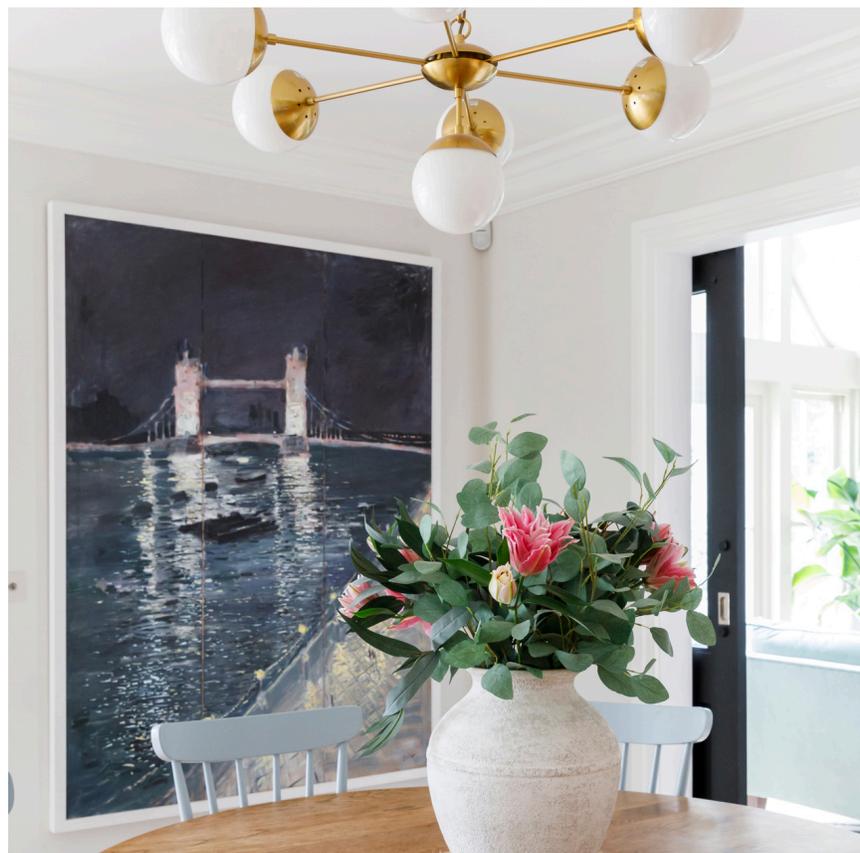

- Detailed electrical plan: Including circuits for groups of fittings and switch reference

### Add on Services charged at our Hourly rate:

- Elevations: Showing the position of wall lights, switches and sockets
- Electrical Schedule: Including recommended fittings with supplier info, lamp requirements and relevant technical information
